

TLS Verification in Outlook/Gmail - March 2019

RELEASE NOTES

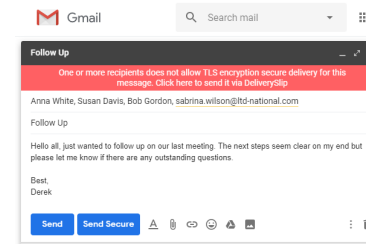

TLS - Transport Layer Security Verification

Security is only as strong as your weakest link. When you send a message to recipients whose mailboxes do not comply with Transport Layer Security (TLS) protocols you run the risk of having your message intercepted, jeopardizing your privacy and the data integrity of your communication.

DeliverySlip TLS Verification will stand guard over your regular email by scanning your intended recipients to ensure that they enforce TLS standards for their incoming mail. If we detect that one or more of your recipients are not TLS compliant; we'll automatically prompt you to send securely via DeliverySlip instead. For highly sensitive data, we still recommend sharing securely via DeliverySlip.

TLS Verification will work directly from Gmail or Outlook with no need to redirect your email or switch email MX records. Contact us to have TLS verification enabled for your organization. It's free.

Works with our Chrome & Edge extension

DeliverySlip TLS - highlights

No cumbersome gateway to install

No email redirection required

Prevents data leaks

Scan is performed Instantly in Outlook / Gmail
